

INCLINED ELEVATORS

THE PROFESSIONALS FOR EVERY ANGLE

Everything from a single source, from the bid to planning, installing and servicing the system.

With our three inclined elevators, the Comfort, the Intra and the Piccolo, we can provide the right product for any operational area. From the hillside residential community to the private installation, providing transportation to public lookout points and hotel complexes, our equipment must guarantee that the journeys up and back down are completed in total safety. We are glad to accommodate special requests and for all of our equipment we guarantee compact construction with a long service life. Through constant refinements and optimization processes, you can be sure to receive state-of-the-art equipment from us.

COMFORT

The „Comfort“ model is our most popular system. Whether the classic S- or L-line variants or the elegant I- or C-line configurations, you will be impressed by everything about the „Comfort“ model. All cabins are equipped with LED lighting, this also applies for our „Intra“ and „Piccolo“ inclined elevators.

INTRA

The Intra is the right option for all indoor systems.

PICCOLO

The „essentials“ model. Though not fitted with all the extras, the „Piccolo“ is rugged and highly versatile.

COMFORT

comfortable
reliable
safe

Make your first-class choice with the „Comfort“ inclined elevator. Whether to simplify access to multi-level hillside residences or to open up public areas and hotel facilities to more visitors, our „Comfort“ model is ideal for any situation. Automatic leveling is standard. We will be glad to advise you on how to realize your vision.

COMFORT S / L-LINE

Our classic, standard design is roomy enough to hold four to twelve people and it's wheelchair accessible. Extremely simple operation is minimized further with the automatic cabin drive. The exit door features automatic locking for maximum safety, and can only be opened if the cabin is at a station. Design and function: The windows are made from tinted acrylic glass the cabin floor is covered with non-slip profiled sheet aluminum, and the base material is hot galvanized steel. Together, they make a rugged, attractive module that can withstand any kind of weather.

COMFORT I / C-LINE

Naturally, the enhanced I- or C-lines can also carry four to twelve people. Other extra touches such as additional bench seats, air conditioning or piped music can be installed on request. A variety of materials is available for the cabin interior furnishing, including flagstones or carpeting for the floor as well as synthetic resin decoration and a selectable viewing area for the ceiling.

INTRA

We will not leave you up in the air. Our elevator systems are perfect for a wide range of application areas.

The INTRA is the right system for making multilevel hillside residences or hotel complexes with a shaft installation more easily accessible. The „Intra“ runs on extremely low-noise rails. The shaft installation serves to protect the system from the elements, and this in turn reduces maintenance effort for us and for you.

FOR ALL INDOOR APPLICATIONS

With a very wide range of paneling options as well as colors and accessories for the interior décor, we can customize the cabin precisely to your taste. If you want the cabin to be made entirely of glass, or mirrors with wooden or sheet metal paneling, flagstones or carpets on the floor, and handrails in chrome or brushed steel. With us, everything is possible. We can even modify the simple analog control panel found in vertical lifts to suit your wishes. You can choose between conventional buttons and touchscreen panels with clear, easy-to-

understand design, as well as badge or key operation to ensure that only authorize passengers ride in the cabin.

PICCOLO

THE SHORT ANSWER FOR TALL ORDERS

With the „Piccolo“ inclined elevator, you have a system that has been reduced to the optimum for carrying up to four passengers.

With its compact outer dimensions and tough, weatherproof materials, this system is perfect for gaining access to sites on private premises or difficult hillside locations.

The „Piccolo“ is fitted as standard with an easy operation door with manual actuation, practical handrails for safety, and non-slip, easily maintained floors made from profiled sheet aluminum.

OUR STANDARDS

SAFE, LONG-LASTING, INDIVIDUAL

Our inclined elevators offer superior performance in every aspect:

- they are handicapped accessible in conformance with SIA 500 / (EN 81-70) [Comfort, Intra]
- with automatic leveling, they always remain vertical
- structure-borne noise separation means that they run on low-noise rails
- they are unaffected by the weather
- they are child's play to operate
- based on several different drive unit options, the system can be adapted to conform to prescribed construction methods

A REAL EYECATCHER

Are you looking for a system that satisfies your requirements and is equipped to your specifications?

Music, light, bench seats, air conditioning inside, or even especially elegant, tinted windows in the cabin superstructure.

We will be glad to advise you on the many and varied options available to you, and to install them to your satisfaction.

All systems built by us conform to the prevailing norms and safety standards.

Overspeed trigger

OUR CUSTOMERS ARE IMPORTANT TO US

- Service
- Performance
- Customer satisfaction

SERVICE ENGINEERING AND DEVELOPMENT

As a subscriber to the Swiss Total Quality Management system, we place a very high priority on our service and customer satisfaction.

WE DO TAKE IT PERSONALLY:

Our customers will always have a named contact person for the duration of the project.

WE DO EVERYTHING:

From preparing the bid to planning and all the way through to installing and servicing the equipment.

EVERYTHING IN ONE PLACE:

Our in-house service department is at the disposal of our customers 365 days a year.

EVERYTHING ON SITE:

With the latest technology, we can even carry out remote diagnostics over the phone in the event of breakdown.

EVERYTHING IN STOCK:

We guarantee that we will ensure the availability in stock of every spare part for every system we build or convert.

OPEN TO EVERYTHING:

We will be delighted to carry out your individual wishes in keeping with our standard designs, functionalities and safety.

EVERYTHING IN ORDER WORLDWIDE:

We look after over 200 systems all over the world, so we rely on our cooperation agreements with respected local companies.

EVERYTHING NEW:

To ensure that our customers always benefit from the latest advances in technology, our designers and engineers are constantly working on improvements and advances.

Our thoroughly qualified and professional service ensures that you will receive a system that satisfies your wishes entirely, built strong for a long service life, as well as expert planning and installation.
